## K210

**Crimps both Insulated & Uninsulated Terminals**

Storage for two sets of crimping dies in the handles

## ***Premium Crimping Tool***

The new Greenlee K210 is a premium crimping tool for terminals and wire ferrules. It has two unique features that make it the most user friendly tool of its type on the market.

- No tools are needed to change the crimping dies. Simply pull a captive pin, remove one die, install a new die, and then reinsert the pin.
- In addition to the dies in the crimping jaws, two additional die sets can be stored right in the handles of the K210 so there is no need to carry loose dies in a tool pouch or your pocket.

Additionally, the K210 has a precision mechanism that provides for a super-smooth crimping action along with excellent long term durability. The handle grips are also deep cushioned to remain comfortable for crimp after crimp.

The K210 comes standard with three sets of crimping dies: (1) 10873 for 22-10 AWG insulated terminals, (2) 10874 for 22-10 AWG uninsulated terminals, and (3) 10875 for 26-8 AWG wire ferrules. Additional dies for other applications are also available.

Try the K210 and feel the difference a premium tool can make.
