

BK242LWH - NEW

Builder Kit Chime with Junction Box Transformer and 2 Lighted White Rectangular Pushbuttons

Overview

Now with improved tone duration, quality and volume!

Exclusive transformer design saves valuable time during the installation process. No more mounting the transformer in a remote location and running wires to various points. With NuTone's patented system, just run the wire, then connect and drop the entire transformer in the junction box. Two simple low voltage connections later and the chime is installed and working. You can move on to the next project.

- Smooth white cover with rounded corners for a fresh design that blends with builder finishing techniques
- Two-note chime for front door, so no guest will be missed
- Chime wires to a junction box transformer so you are assured of uninterrupted service and are never dependent upon batteries (transformer C915, included)
- Two lighted rectangular shaped pushbuttons with non-stick action included so you have one less thing to buy and the convenience of a complete package
- Junction box transformer design makes for an easy and quick connection to low voltage wiring, insert into the single-gang junction box, and the transformer is safely concealed behind the wall
- Order as standard pack of 24 to assist with your planning and still retain that economical edge
- Refer to your local municipality building codes to be sure you are installing chimes that adhere to code since they vary by region
